

The inside story: health effects of indoor air quality on children and young people

www.rcpch.ac.uk/events/indoor-air-quality

Professor Stephen Holgate (RCP) and Professor Jonathan Grigg (RCPCH), are delighted to invite you to the launch of *“The inside story: health effects of indoor air quality on children and young people”*.

This report presents analysis of recent research, findings from industry and healthcare experts; together with the views and experiences of children, young people and their families. We present a call to action to protect children from the health effects of indoor air pollutants.

Raising awareness of the importance of indoor air quality is vital for children’s health. Children in the UK spend the majority of their time indoors. The air in our homes can be an unseen, and overlooked, way children are exposed to pollution.

The event is an opportunity to hear from the research team and special guests about:

- the effects of polluted indoor air on child health,
- policy developments and the actions needed to protect future generations,
- how the current regulatory landscape and how building factors can affect air quality,
- unique insights from children and young people, along with their recommendations for better indoor air quality.

Book your place by visiting:

<https://www.eventsforce.net/rcpch/306/register>

A full programme will be available on the RCPCH website shortly.

When: 28 January 2020, 4pm – 6pm
Where: The Council Chamber @ RCPCH London Office
Who: Open to paediatricians and other child health professionals; professionals interested in air pollution, public health, or the built environment; parents and carers.
Cost: Free (registration required)
